When you have found by the Almanack & the upmost table the day the Moon is at S. then look for the Haven or Port you desire, And if the hours and quarters stand before the Port, there it is Highwater so many hours & quarters before the Moon comes at South, But if the hours and quarters stand after the Port, there it is High water so long after the Moon is at South.

As for Example.

By the first Tables you find, the Moon is at South at 4 a Clock, 5 dayes after the Change, which shews it is at that time full Sea at Portsmouth, &c, at Dover, Harwich &c, an hour and half sooner: *viz.* at 2 a clock & 30 minutes. But at London, Tinmouth, &c. 3 hours after, *viz.* at 7 a clock.

If you would know how many years Purchase a Lease or Annuity for 14 y. is worth after the rate of money at 6 in the hundred, Look in the Columne on the left hand for 14 the number of years to be purchased; & against that on the right hand, you will find 9 years & 3 months: so that a lease for 14 y. is worth 9 years & 1 quarter of a years purchase; for that proportion 3 m. bear to 12 months. But if you would know what a Lease for 14 years in being, is worth to be made up 21 years, after the rate of 6 in the hundred: do but substract 9 years purchase & 1 quart. (the value of 14 years) from 11 years & 3 quarters (the value of 21 years after that rate) and the remainder, being 2 years purchase and an half, is the true value.

But if you would know what it would be worth at the rate of mony at 10 in the hundred: substract then 7 years and one third of a year (the value of 14 years in being after that rate,) from 8 years and two thirds of a years purchase (the value of 21 years after that rate) and the remainder being one years purchase and one third part of a years purchase, is the true value. And so of any other number of years.

A Rule to know by the price of one pound, what any commodity you would buy comes to by the Hundred.

Reckon how many Farthings are in the price of one pound: then count twice so many shillings and once so many pence as there are Farthings, and that makes the just price of a hundred at Five-score to the hundred. But for Five-score & twelve to the hundred, you must count twice so many shillings and once so many groats as there are farthings in one pound.

Of the Eclipses this Year.

THere will be this Year two Eclipses, both of the Sun; but neither of them visible in England: the first on the 6 of *Feb.* about 8 at night; the second on the 2 of *August* about nine in the morning.

A Rule to know what one dayes expence amounts to in the whole Year.

Reckon so many pounds, so many half pounds, so many groats, and so many pence, as you expend pennies in one day, and these put together is what your expence amounts to in the year.

As for Example.

If your expence be 6 pence every day, 6 pounds 6 half pounds 6 groats and 6 pence makes 9l 2s 6d which is the whole years expence.
